#### 1 Introduction

Neurodegenerative diseases (NDDs) are serious ailments that predominantly impact neuron cells. They lead to the gradual degeneration of the central nervous system (CNS) or the brain, disrupting motor and cognitive functioning and potentially leading to either disability or death. The symptoms of NDDs usually develop progressively over time. The quality of life of a patient and their close relatives as well as the day-to-day work routine may be affected as a consequence of short-term or long-term limitations, disabilities, and abnormalities (Dikmen et al., 2003; Rajak et al., 2015). Various types of diseases that attack and degenerate neurons in the brain include Parkinson's disease (PD) (Halli-Tierney et al., 2020), Alzheimer's disease (AD) (Vaz and Silvestre, 2020), motor neuron diseases (MND) (Miccio et al., 2021), dementia (Fazio et al., 2020), schizophrenia (Freedman et al., 2020), Huntington's disease (HD) (Ho et al., 2019), and prion disease (Scheffler et al., 2020). Prion diseases are neurodegenerative illnesses that are most likely severe and fatal. They are triggered by disease-causing protein complexes termed prions (Pan et al., 1993). Despite their differences in diagnostic features, many NDDs share certain molecular and subcellular commonalities. NDDs share a number of characteristics, including late onset, synaptic defects, significant neuronal death, and protein collecting and accumulation in the brain (Choonara et al., 2009). Dementia was thought to be a reversible ailment in the 18th century. It emerged as a cognitive change accompanied by delusions and hallucinations, which were important for the diagnosis of the disease and could afflict people of almost any age (Leibing, 1998). Over time, however, it was confirmed to be an irreversible neurodegenerative form of disease. Millions of people worldwide may suffer from dementia, primarily as a result of Alzheimer's disease. It affects roughly 1% of people over the age of 50, and it can affect people more than 50% of people older than 70 (Bertram and Tanzi 2005). These statistics are predicted to rise dramatically as the worldwide population increases. NDDs degrade a person's cognitive abilities during their primary productive years, and there is no solution for them (Dayalu and Albin, 2015). AD is a severe, chronic NDD that leads to dementia. Dementia is a leading cause of death among the elderly, yet the exact causes of AD are still unknown. Extracellular deposits of protein peptides such as peptides of beta amyloid and plaque were discovered in the parenchyma of the brain and cerebral artery walls (Bertram and Tanzi, 2005; Morris et al., 2016).

This chapter will focus on nanomedical treatments for AD. Thus, the majority of nanoparticle systems used for targeted drug delivery to the brain are made up of synthetic and natural proteins, polymers, and polysaccharides in which the incorporation of the drug is done (Rajput, 2015). Nanoparticle delivery methods that are viable options for administration include nasal (Rabiee et al., 2021) oral (Mittal et al., 2011), intramuscular (Kassem et al., 2020), subcutaneous (Wen et al., 2017), intraocular (Vashist et al., 2018), and intravenous (Dai et al., 2018) administration routes.

#### **ABSTRACT**

Leishmaniasis is an infectious neglected disease caused by the different Leishmania parasites. transmitted to humans by the bite of phlebotomine female sandflies infected with protozoans, it affects poor people due to malnutrition, weak immune system, and poor housing capacity. Mainly 3 types of leishmaniasis observed are Visceral leishmaniasis (VL), Cutaneous Leishmaniasis (CL), Mucocutaneous leishmaniasis. In many countries, around 700,000 to 1million people suffering are from leishmaniasis. estimated around 26000 65000 deaths to occur annually. For its treatment few allopathic drugs are available but anyone is ideal due to its high-level toxicity, high resistance. The present chapter will focus on antileishmanial activity of reported ayurvedic drugs that are available in different places of India.

#### INTRODUCTION

Leishmaniasis is an infectious neglected disease caused by the different species of *Leishmania* parasites, transmitted to humans by the bite of female phlebotomine sandflies infected with protozoans,

widespread disease seen in any age peoples, however, compared to the old age peoples the children are more prone to cause the leishmaniasis, affect the poor people due to malnutrition, weak immune system, poor housing capacity, hence considered to be a disease of the poor[1]. Mainly 3 types leishmaniasis observed are Visceral leishmaniasis (VL), Cutaneous Leishmaniasis (CL), Mucocutaneous leishmaniasis. VL is also called Kalaabdominal azar, shows pain. darkening of the skin, loss of appetite, swelling of the spleen, low blood count lead to death, CL is the most common disease shown lesions and nodular lymphangitis, skin ulcers and MCL very rare disease shown selling and ulcers on mucosal parts[2]. WHO officially reported 700,000 to 1 million people are suffering around 26000 to 65000 deaths occurs annually, ninety-five percent of the VL cases occur in 10 countries Brazil, Bangladesh, China, Ethiopia, India, Nepal, Kenya, South-Sudan and Sudan, ninety-five percent of the CL cases occur in six countries Afghanistan. Algeria. Brazil. Colombia, Iran, Iraq, Syrian Arab Republic, ninety percent of MCL cases occur in Brazil, Bolivia,

#### **PREFACE**

This book is a result of extensive literature survey done by students of pharmacy, and other science fraternity from different colleges all over India. The information in this book is not intended to be a substitute for professional medical advice. Do not use this information to diagnose any disease of bacterial/viral/fungal origin also the book should not be used for ayurvedic treatment of any disease of bacterial/viral/fungal origin. However, the book is published to serve as a guide for people wishing to do research on our indigenous plants which can be used in the treatment of diseases of bacterial/viral/fungal origin.

We are thankful to all the contributors as without their help publishing this book would have not been possible. We wish all our readers knowledgeable and research-oriented reading.

# EFFECT OF RATE RETARDING POLYMERS IN THE FORMULATION OF EXTENDED RELEASE TABLETS OF LOVASTATIN

D. Srisailam<sup>1</sup>\*, Dr. K. Balaji<sup>1</sup>, Ramya Sri.S<sup>2</sup>

<sup>1</sup>Department of Pharmaceutics, Avanthi Institute of Pharmaceutical Sciences

<sup>2</sup>Department of Pharmaceutics, Osmania University, Hyderabad, Telangana, India

#### **ABSTRACT**

The aim of the present study was to develop Lovastatin extended release tablets to maintain constant therapeutic levels of the drug for over 12 hrs. Gum Acacia, Almond gum and Grewia gum were used as polymers. All the formulations were passed various physicochemical evaluation parameters such as bulk density, tapped density, carrs index, hausners ratio, angle of repose, weight variation, hardness, thickness, friability and drug content. From the dissolution studies it was evident that the formulation F9 showed better and desired drug release pattern i.e., 98.82% in 12 hours. It contains the Grewia gum as polymer. It followed Higuchi release kinetics mechanism.

**Keywords:** Lovastatin, Gum Acacia, Almond gum, Grewia gum and Extended Release Tablets.

#### INTRODUCTION

The oral route is the most popular route used for administration of drugs, which is due in partto the ease of administration and to the fact that gastrointestinal physiology offers moreflexibility in dosage form design than most other routes. The terms Sustained release, prolonged release, modified release, extended release or depot formulations are used to identify drug delivery systems that are designed to achieve or extend therapeutic effect by continuously releasing medication over an extended period of time after administration of a single dose. <sup>1,2</sup>

To,

The Director.

NIPER.

Hyderabad, Telangana, India

Sub- Request for Institutional visit for our students -regd.

Respected Madam,

Greetings from Avanthi Institute of Pharmaceutical Sciences, I would like to request you to permit our students of III B. Pharm & III Pharm D to visit your reputed institution on a suitable date in this month at your convenience. The objective of the said visit is to enhance the knowledge of students on current developments in the field of pharmaceutical sciences and also through an insight on career opportunities. We will be grateful to you for considering the same.

We look forward to your kind response in this regard at the earliest. Thanking you

With regards,

Gunthapally (V). Abdullapurmet (M).
R.R. Dist. Telangana.

**Open Access** RESEARCH

# A novel simultaneous high performance liquid chromatography-PDA method for the determination of Tenofovir AF, Darunavir, Emtricitabine and Cobicistat in bulk and its application to marketed formulation

Challamalla Pavani and E. Susithra

#### Abstract

Background: The present research article involves the simultaneous determination of Tenofovir alafenamide, Darunavir, Emtricitabine and Cobicistat in bulk as well as in tablet dosage form using high performance liquid chromatography.

Result: The separation was performed using DIKMA Spursil, C<sub>19</sub>, ODS, (4.6 × 150 mm × 5 µm) analytical column using the mobile phase acetonitrile and 0.1% Orthophosphoric acid in the volume ratio of 70:30 at pH 3. The eluents were detected using PDA detector at 254.0 nm. After optimization subsequent validation study of different parameters was performed by utilizing the optimised condition as per the ICH guidelines. Under this optimised conditions Tenofovir alafenamide, Darunavir, Emtricitabine and Cobicistat were eluted at 2.287 min, 2.507 min, 4.062 min, 6.011 min respectively. Percentage assay was found 99.21% for Tenofovir alafenamide, 99.80% for Darunavir, 99.80% for Emtricitabine and 99.84% for Cobicistat. Tenofovir alafenamide was found linear in the range of 2.0-10.0 µg/mL, Darunavir (160.0-800.0 µg/mL), Emtricitabine (40.0-200.0 µg/mL) and for cobicistat (30.0-150.0 µg/mL). The corelation coefficient was found 0.999 for all the APIs. The detection limit was found 0.14 µg/mL for Tenofovir alafenamide, 2.14 µg/mL for Darunavir, 0.6 µg/mL for Emtricitabine and 7.32 µg/mL for cobicistat. In the LOQ study the quantitation limit was found 0.47 µg/mL for Tenofovir alafenamide, 7.12 µg/mL for Darunavir, 2.10 µg/mL, for Emtricitabine and 24.42 µg/mL for cobicistat.

Conclusion: All the studied API's has been highly resolute utilizing the optimised condition and found extremely suitable for the determination of all of them simultaneously in marketed dosage form as well as in the bulk form.

Keywords: Tenofovir alafenamide, Darunavir, Emtricitabine, Cobicistat, HPLC

#### Background

Antiretroviral therapy (ART) for HIV-1 infection has vastly improved over time [1], and HIV-1 is currently regarded as a chronic but manageable condition [2, 3]. The first protease inhibitor (PI)-based single-tablet regimen for treatment-naive or some treatment-experienced persons living with HIV is the fixed-dose combination tablet darunavir-cobicistat-tenofovir alafenamideemtricitabine [4]. Symtuza is a prescription medicine approved by the United States Food and Drug Administration (FDA) for the treatment of HIV infection in adults and children weighing at least 88 pounds (40 kg) who

#### TO WHOM SO EVER IT MAY CONCERN

This is to certifiy that Mr/Miss.RAFQUA ZEB is a bonafide student of AVANTHI INSTITUTE OF PHARMACEUTICAL SCIENCES. And he/she has undergone industrial training in our organization from 11-10-2021 to 19-10-2021, as part of partial fulfillment of his/her B. Pharmacy course bearing Hall Ticket no-18GN1R0035.

During the training period he/ she had interacted with Quality control, Quality Assurance & Production departments and acquired basic knowledge in these areas.

During this aforesaid period, we found him/ her hardworking, sincere and learning attitude.

#### ABOUT AVANTHI

Avanthi Educational Society started its journey under the eminent Leadership of Sri M. Srinivasa Rao Garu, Member of Parliament, Anakapalli. Under his chairmanship, the group has made a remarkable stride in the field of education offering several courses in Under Graduate, Post Graduate, Engineering and Pharmacy Programs. This milestone is achieved as the institutions impart quality and career oriented education, countering the challenges of modern world through dedication, determination, prompt execution and innovative ideas of our academic council. Today, Avanthi Educational Society is proud to have a strength of over 16000 students with 15 institutions under its ambit.

#### **ABOUT PROGRAM**

Methodology plays a significant role to shape the nature and process of research and its outcomes. The course will focus on theoretical and practical inputs on different stages of research that expose the scholars to relevant for quantitative and qualitative traditions. The present workshop will help to address various research issues and enrich the scholars in social sciences on research methodology. This workshop on data analysis can help to provide insights for high impact research especially for the researchers in social sciences. A real-world example will be used to illustrate concepts/methods and highlight common challenges associated with testanting and implementing research methods with tentinent subject matter experts.
